# About Teikyo University

## School Philosophy

Through applied programs we aim to develop skilled human resources who

- Recognize that achievement comes from effort,
- Have open minds and extensive knowledge,
- Think from an international perspective,
- Have creativity and good character.

## University was founded in 1966

Born in times of Japan's rapid growth, the mission statement of Teikyo University remains alive and well today.

Starting with faculties of Economics and Liberal Arts, Teikyo University has been developing as a solid comprehensive university, offering a wide range of additional programs including school of Medicine.

Teikyo University is a place

- To learn and study
- To practice on the leading edge of team-based medical care
- To participate in sports and cultural activities

We offer an environment that encourages students to challenge and improve their ability.

The integration of practical learning, international perspectives and open mindedness is the backbone of our educational structure. Building on this, we value and support the efforts of each student and strive to help them develop strengths and qualities that will enable them to carve out their own future.

Developing human resources who have "their way," and who can think and act to demonstrate their own individualities.

The university where students discover, nurture and challenge their own talent.

We are Teikyo University.

## What does "one's way" mean?

"One's way" refers to a life philosophy whereby one finds their purpose or interests and learns the knowledge and skills to maximize their own unique individuality to their advantage. One assumes full responsibility for the consequences of their actions. We offer our support to encourage students to learn to live their lives "their way."

## President's Message

### Dare to be an individual - become an independent thinker that is open to the opinions of others.

University is the time when you start to delve much deeper into your specialized field. Unlike high school, it's not your teacher's responsibility to hold your hand while you work. Student must be self-motivated and proactive in the learning process while keeping their future in mind.

What will you do after graduation? What kind of identity will you create for yourself once you are out in society?

We want you to keep this always in mind as you continue to learn, and we think it's best for student to have an idea of what they want to get out of their university experience before classes begin.

Don't worry, though; if you're not sure of your goal, Teikyo has a curriculum and system that will help you direct your own academic career. This includes:

Practical learning that helps student master logical thinking skills through real-world experience.

International perspectives that help students learn how to understand and experience other cultures.

Open mindedness that helps student learn a balanced mix of knowledge and skills that are necessary for your future.

These three elements provide students with a wide base of knowledge and an international perspective. By combining these with your own perspective and openness, we hope you will gain the power to think for yourself and develop your individuality.

Finally, we hope that you will be able to study your chosen subject to a satisfying and profound depth, and share this feeling of accomplishment with the life-long friends you have made along the way.

Chairman · President  
Yoshihito Okinaga |

Born in Tokyo. Following graduation from Keio University's Faculty of Science and Technology, earned M.S. in mechanical engineering from Keio University Graduate School of Science and Technology. Currently, he is chairman and president of Teikyo University as well as president of Teikyo University Junior College

# The Japanese Language Course

## Learning Japanese

The Preparatory Course for Japanese as a Foreign Language is offered to students whose native language is not Japanese to learn sufficient language skills in a supportive environment. You will meet students from every corner of the world attending this course. This is an environment of ethnic diversity offering opportunities not only to improve your Japanese language skills but also to appreciate other cultures and develop a global perspective. We invite you to join us in this course to take the first step towards self fulfillment.

The preparatory educational course of the Japanese language has the special entrance examination system and the enrollment discount arrangement for those students who want to deepen their studies even to a greater extent.  
Targeted faculties and departments: Faculty of Economics (Department of Economics, Department of Business Administration, and Department of Tourism Management), Faculty of Law, Faculty of Liberal Arts, Faculty of Language Studies, Faculty of Education (Department of Education and Culture), and each department of Teikyo University Junior College - \* There are requirements based on academic performance.

### Student's Message

The Japanese Language Course

Tian Jingzong

China

You can study and have interaction with others while experiencing the culture of Japan and that of the world.

By having daily conversation in Japanese with students from various national backgrounds, I strive to improve my language efficiency including conversation and hearing skills. Some people actually think differently from I do, but when trying to listen to them carefully, I can gradually understand their thoughts. I fully enjoy my student life in Japan while having fun with fashion, video games, and the music of Japan.

### Features

1. The 4 skills of "reading, writing, speaking, and listening" can be readily improved at every level. In addition, classes are tailored to each student's career path and goals, whether it is university or graduate school.
2. Classes are set up based on the proficiency level of students with curriculums to accommodate beginners to advanced students.
3. Small class sizes are conducive to creating a less intimidating environment to encourage interactions between students and the instructor whereby students will feel comfortable about asking questions as necessary and will also allow the instructor to pay closer attention to individual students.

Approximately 400 international students from 18 countries around the world study at Teikyo University. Even if your Japanese may be limited at first, it will be improved through the Japanese lessons whereby you will develop listening comprehension and verbal communication skills one step at a time. If you make consistent efforts to build on what you have learned on a daily basis, you will reach the level where you understand the contents of lectures given in undergraduate or graduate schools. If there are any questions, please feel free to stop in and consult with us.

### Message

It is important to build up your knowledge of Japanese little by little each day.

We can do it together.

The Japanese Language Course

Namiko Utsuki

We provide support so that students advance to a level where they can fully communicate their opinions in Japanese in either university or graduate school classes.

The Japanese Language Course

Huijuan Dong

# Faculty of Economics

Economy is an essential requirement for human existence.

We offer a special entrance exam for international students

## Student's Message

Department of Economics  
Chuon Somaly

Cambodia

I want to save farmers in Cambodia. I take my first step toward that goal by completing my university education. My parents in Cambodia engage in farming. Many local farmers face hardships because of unstable prices of vegetables due to increase and decrease of crop yields. My goal in the future is to get back to Cambodia and establish a company that can achieve lump-sum purchases and provide a stable supply of crops so that the prices of vegetables can be constantly maintained. To do so, I want to acquire required knowledge in accounting, bookkeeping, and economics.

# Faculty of Law

In a country of democracy, law is fundamental to the national governance.

We offer a special entrance exam for international students

## Student's Message

Department of Law  
Wu Zhengyang

China

Learn actively in your own way and totally enjoy life as a Teikyo University student. As I attended and studied at high-level and fulfilling lectures under teachers I respect, I gradually came to build up a sense of attachment to my school. In the future, my goal is to become a legal researcher and instructor. It depends totally on yourself as to how to lead productive student life in the university. I have a strong confidence that Teikyo University, which offers and opens ways to those hard-working students, will be more wonderful university 10 or 20 years later in the future.

## Department of Economics

Creating business leaders with the ability to analyze economic trends and tackle difficult issues

**A curriculum focused on practical learning, taught by professors from a variety of sectors**

Our practical learning-focused curriculum starts with understanding the places where economic activity happens, then moves on to the logical foundations. Our lectures, focused on practical subjects, are delivered by professors with abundant work experience from backgrounds as diverse as academia, business, and government.

**We've prepared a wide variety of subjects to serve as a starting point for learning about economics**

We offer a wide spectrum of subjects related to economics. By starting out with areas that grab their attention, students can get involved and interested in economics, allowing them to learn deeply about a variety of subjects.

**Creating professionals who can establish clear goals, then think and act on their own**  
We will raise students' awareness concerning finding a job by enabling them to visualize their dreams for post-graduation in detail, make their goals clear, and find the future that suits them.

## Department of Business Administration

Giving students the ability to deal with the many issues that arise in business

**Three courses to choose from after matriculation, to match students' goals**

Students choose from three courses during the guidance session right after matriculation: the Management Course, teaching management and its applications, the Company and Accounting Course, teaching accounting and its applications, and the Sports Management Course, teaching sports-related management.

**Three levels to choose from depending on one's level of proficiency, making learning more efficient**

Because all subjects are divided into three levels (introductory, basic specialization, advanced specialization), one can learn effectively and step-by-step according to one's interests, abilities, and academic progress.

**Gaining the ability to solve real-world problems through a practical education**

Students will receive practical education on both the principles and applications of company management. We will impart an ability to understand and solve the issues faced by real society, especially those of companies.

## Department of Regional Economics

Using the tools of economics, we create professionals who can contribute to the invigoration and recovery of regional areas.

**Creating members of society who can invigorate regional areas**

We cultivate professionals who possess basic knowledge of economics and its applications, as well as entrepreneurial spirit not bound by preconceived notions, who can revitalize regions with new ideas and ways of thinking.

**Focusing on field work to understand actual society**

We provide practical learning through educational programs focused on field work using links with local companies and administrative agencies. We give students the knowledge and skills to understand and solve the problems of society today.

**Cultivating the ability to understand regional economies from multiple perspectives**

Using the abundant experience of our professors, who come from backgrounds working with local companies and local governments, we provide classes that provide a close-up look at regional economies from many different angles.

## Department of Tourism Management

Cultivating professionals with a wide-ranging education, deeply international perspective, and reliable specialized knowledge.

**A curriculum teaching a wide spectrum of tourism-related subjects**

We offer a curriculum allowing students to understand the significance of tourism in today's society and gain a wide variety of knowledge concerning it, including the creation and supply of tourism products as well as the mechanisms behind consumption.

**A wide-ranging yet specialized education based on a practical curriculum created with the actual nature of the tourism business in mind**

Our team of professors, with extensive experience in tourism-related industries, will provide effective training and instruction with lectures, exercises, and practical training based on the latest developments.

**Cultivating professionals capable of contributing to the development of cities and invigoration of regions through tourism**

Through education and research concerning planning and management of tourism sites as well as the political and legal framework surrounding them, we create members of society who can contribute to the revitalization of regions, attracting of customers, and cultural exchange through tourism.

## Department of Law

We provide a practical education focusing on cultivating knowledge of the law and legal thinking

**Three specialized courses, focusing on different branches, to match students' goals and interests**  
Based around the various qualifying exams, we have established three specialized courses to allow students to realize their goals: the Government Employee Course, the Corporate Law Course, and the Legal Course.

**Education focusing on legal knowledge and character building usable in the real world**

We focus not just on logical explanations, but practical learning of the law as well. Our goal is acquisition of applicable knowledge of the law through imparting the ability to make fair judgments and think logically, including the use of mock trials, in the way that is required to carry out the law.

**Practical lectures from our skilled team of professors**

We offer practical lectures from our experienced team of professors, who come from the legal world, government world, and corporate world. They will provide students with knowledge, backed up by experience, that is necessary in the real world.

## Course introduction

### ● Government Employee Course

A course primarily for students aiming to become a national or regional public servant; for working at administrative agencies and other organizations.

### ● Corporate Law Course

A course perfect for people who wish to join a private company and use their specialized legal knowledge for business.

### ● Legal Course

A course for those who dream to work in the legal world, and who want to pass the National Bar Examination and move on to graduate law school.

## Pick Up

### The Constitution

Using actual court cases and systems, students will cultivate their knowledge and understanding of the basic principles and rights provided by the Japanese Constitution. Using the arguments of both plaintiffs and defendants, abstract legal concepts and concrete examples will be explained together, and students will consider issues and how they are solved.

# Faculty of Liberal Arts

Having another look at cultural roots will inspire true creation.

We offer a special entrance exam for international students

## Student's Message

Department of Psychology  
Kilic Zeynep

Turkey

When compared to Western colleges and universities, you can study psychology more broadly based on international perspectives as an advantage. I want to become a counselor for children with a developmental disability, so I selected Teikyo University which has the Developmental Psychology Course. The course teacher is a professional counselor who teaches us through his own experience, while I can learn from his practical and easy-to-understand lecture. Since study of history in the university totally differs from the study I received back in my home country, I have realized many points that have raised my awareness.

# Faculty of Language Studies

Cultivate human resources that can collaborate with others while interacting with the world.

We offer a special entrance exam for international students (Application to the Department of your native language is not available.)

## Student's Message

Department of Language Studies  
French Language Course  
Bui Vinh Khiem

Vietnam

I enjoy my exciting campus life every day. Sometimes I have some points I couldn't get during the class taught by the teacher at his office with other seminar students. Joining a dance circle, I learn dancing in various genres from senior circle members. I'm quite busy every day with class and circle activities, but I also go to Harajuku to buy some used clothes at thrift clothes shops there as my relax time. I really want to study hard so that I can return the courtesy to my parents who have brought me up.

## Department of Japanese Cultures

Creating members of society who possess diverse knowledge concerning Japanese cultures, strong Japanese language ability, and an international viewpoint

A varied teaching team knowledgeable about many specialized fields. Our teaching team is well-versed primarily in the diverse fields of Japanese thought, culture, society, film, religion, and popular culture, and will carefully lead students from the absolute basics through highly deep subjects.

Unique lectures approaching the true nature of Japanese culture from a number of angles

In order to dig deep and search for the special aspects of Japanese culture, we offer well-prepared and unique lectures that touch on many facets of Japanese culture, including film, entertainment, publishing, music, mass media, and more.

Support for career development, including teaching, curating, and library services, in order to match individual students' needs

Students can obtain a number of qualifications, including teaching in Japanese, sociology, geography and history, or calligraphy, as well as museum curating or library studies. In addition, roads to many other careers are open, like publishing or mass media.

## Department of History

Cultivating members of society who can examine societal trends historically and logically, and make overall judgments

Learn about every one of five courses, and gain a wide-ranging perspective. After learning the basics of each course (Japanese, Eastern Studies, Western Studies, Archaeology, Geology, and Art History/Cultural Heritage), students can choose the course they are most interested in from the six courses. Students will be able to explore history from a wide-ranging perspective.

We advance research using a combination of educational techniques such as lectures, exercises, readings of historical texts, and more. Students will research various ages from historical and logical perspectives using combinations of lectures, exercises, historical readings, etc., divided by course. Students will be able to learn deeply about specialized areas.

Providing unique subjects to match students' interests. We have numerous subjects available to respond to the needs of various ages of history, including local history, paleography, art history, women's history, and family histories. Each student will be able to heighten their level of interest.

## Department of Sociology

We aspire to cultivate character, employability, and wide-ranging knowledge of sociology, culture, and humanity.

Students will learn the core logic and research techniques for analyzing modern society

We've created a curriculum allowing students to acquire the core logic and research techniques for analyzing society, culture, and humanity of the world today. Our goal is a comprehensive education in the liberal arts as well as specialized fields.

Acquiring highly specialized knowledge and searching for a way to solve social problems

We provide specialized electives in three areas: general sociology, media and communication, and human coexistence and public life. Students will learn specialized knowledge allowing them to identify real-world problems in society and solve them.

Improving character and working to gain the ability and skills needed for life in society

We aspire to give students more of the practical characteristics and employability required for life in society through practical education provided by comprehensive exercises and subjects on career education, as well as four years of classes with high teacher-student ratios.

## Department of Psychology

An opportunity to learn the basics of psychology and specialized subjects such as clinical psychology at the same time in a balanced way

We offer a wide variety of subjects focusing on psychology and also covering related areas

We offer a diverse array of subjects ranging from psychology to related topics, allowing students to study a wide range of fields with our faculty's specialized instruction. In addition, students can become a Certified Psychologist under the auspices of The Japanese Psychological Association.

Three courses allowing learning through focusing on specialized areas. In the third year and above, students join one of the three courses, Basic, Developmental and Social Psychology, to pursue their own specialized studies.

Fully outfitted experimental and practice facilities to support independent learning. Complete facilities and laboratories, including a behavioral development observation room with a monitor room attached, are available. By using these for a variety of experiments, exercises, and seminars, students will be able to build up practical training experience.

## Department of Language Studies

Deepening understanding of other cultures as well as creating professionals who can thrive on the world stage and who possess both language ability and communication ability

Students will learn according to their ability, and in four years they will master a foreign language as their "specialty language"

Students select one language from among English, German, French, Spanish, Chinese, or Korean when they take their test. Over four years, they will make it their "specialty language" and learn it in a systematic manner.

Starting in the first year, students will learn an "elective language" and cultivate an ability to use multiple languages

Students may freely choose and study elective languages beginning in the first year from among eight languages (English, German, French, Spanish, Chinese, Korean, Italian, and Russian).

Transmitting and interactive coursework where students can voluntarily participate

Both of the language course and the seminar have a system in which each class has the limited number of students, about 20. The aim of this system is to place a focus on communication with students so that they can acquire knowledge on a steady basis while determining their levels of understanding.

### Curriculum Features

Based on our principle to encourage students to learn linguistics together with culture, students in each course learn "Languages and Cultures of the World I and II" as compulsory subjects. They are also required to take the "preseminar" class in their second year and "seminar" in their third. In their fourth year, they are to choose between "graduation thesis / production" or "graduation seminar." This curriculum allows students to enhance their expertise by clarifying fields that interest them and becoming aware of problems.

### Course introduction

English Course

German Course

French Course

Spanish Course

Chinese Course

Korean Course

### Pick Up

#### American Cultural Theory

Students will deepen their understanding of characteristics of American culture and differences from Japanese culture from numerous perspectives, including non-fiction, literature, journalism, film, art, and the internet. In addition, texts in English will be used, and the class will be conducted entirely in English.

#### Overview of Modern English

Using examples, the language of English will be broadly explained, including concepts such as the creation of English, its diversity, structure of its words and grammar, its regularity, its connections with other languages, and the systems behind its meanings. Using this knowledge as a starting point, students will seek to deepen their understanding of English.

# Faculty of Education

Learn clinically and broadly about people, education, and society

We offer a special entrance exam for international students  
\*Only for Department of Education and Culture

## Student's Message

Department of Education and Culture  
Kim Jiyoung

Korea

I can learn my favorite language, Japanese, in a spacious and calm environment.

Teikyo University provides fulfilling courses and lectures regarding multi cultures and different cultures. With a dream to teach overseas children Japanese in the future, I looked for and considered schools to advance. Then I came to know that the Department of Education and Culture of Teikyo University has the Japanese Teacher Cultivation course including the special entrance examination system for international students. So I decided to take the exam from this department. After I passed the exam, the university kindly took care of me by introducing a place for me to live, and I can commit myself to study without any anxieties.

## Department of Education and Culture

Creating professionals who take part of in many facets of education, as middle school and high school teachers, as government employees, in corporate jobs related to education, and more

**Supporting a variety of paths forward - not only becoming a teacher, but working at a company or becoming a government employee**

From the first year, students will study the basics of education and being a teacher. Following this, they will be able to study a diverse array of subjects with an eye towards post-graduation, including becoming a teacher, working at a continuing education center, becoming a government employee, or getting involved in an education-related position at a company.

**Learning to think in a way that allows students use wide-ranging knowledge**  
Students will learn how to use their knowledge in a way that allows them to accumulate and use knowledge outside their specialty through learning that requires them to independently find and solve educational problems. This ability will be useful even outside the path to being a teacher.

**A program allowing students to experience teaching on-site and boost their practical skills**

Even from the first year, we allow students to experience education on-site. From the third year, we employ practical instruction that emphasizes school internships and volunteer work, so students will be ready to contribute to their workplaces immediately after graduation.

## Pick Up

### Systems and Management in Education (Junior/High School)

With regards to the ideal "school" within a region, we will primarily analyze methods for linking a school with local society, and the possibilities and issues entailed. In addition, students will deepen their understanding of creation of classes which school support volunteers take part in, as well as recent educational reforms regarding school management, thus learning about the way schools and local society should be linked.

## Department of Elementary Education

Cultivating elementary and preschool teachers who have specialized knowledge and skills that serve them well in real-world situations

### Elementary Education Course

**A diverse curriculum combining theory and practice**

In order to cultivate future elementary and preschool teachers who have a high degree of specialty and practical ability, we have a wide variety of lecture subjects allowing students to learn education theory and get real-world educational experience on-site at the same time.

**Students can obtain qualifications in addition to the teacher's license**

Students can become qualified for jobs such as a special support school teacher or teacher-librarian. With elementary education as the central axis, they will be able to learn about a wide range of subjects, such as educational psychology.

**Learning using experience gained through practical exercises at our various affiliated schools**

We provide students with the opportunity to work with children throughout their four years of study through options like teaching at Teikyo University Elementary School and volunteer activities. With our practical on-site instruction beginning soon after studies begin, students will quickly become proficient.

We provide the foundations for future preschool teachers with on-site learning with children

### Preschool Education Course

**A diverse curriculum allowing students to gain a high level of specialization**

With the learning required for obtaining qualifications at its core, our high-quality curriculum also allows study of a wide-range of subjects such as education and psychology. By freely selecting and studying these subjects, students can gain a high level of specialization.

**Refining practical skills through on-site teaching exercise experience**

From the first year, students will be participating in volunteer activities at Teikyo University Kindergarten, regional day care centers, preschools, and welfare facilities. Through exercises emphasizing on-site experiences, students will become capable professionals.

**Raising the level of future educators by linking theory and practice**

In order to mold preschool teachers and childcare professionals with high degrees of specialization and practical ability, we provide learning that links together childcare theories with on-site experience. Students will gain stronger footing as educators.

# Faculty of Science and Engineering

Work on issues and problems involving human survival, such as global environment and energy.

We offer a special entrance exam for international students  
\*The course for helicopter pilots within the Department of Aerospace Engineering is excluded.

## Student's Message

Department of Information and Electronic Engineering  
Lin Xin

China

Surrounded by a totally wonderful environment and more than adequate facilities, I'm walking toward my dream.

I have loved computers and Japanese animation movies since my childhood. Thinking about studying electronic engineering in Japan, I decided to enroll in Teikyo University having well-organized study environment and facilities. Since I was interested in electronic engineering, I committed myself to study while receiving support from instructors and other international students. I try hard to acquire advanced knowledge and skills as an electronic engineer, and I'm also considering enrolling in the graduate school, with a view of getting employed in Japan in the future.

## Department of Mechanical and Precision System

Creating professionals with wide knowledge of mechanical engineering and practical knowledge of craftsmanship

**A fully-outfitted environment for applied learning, allowing students to satiate their desire to know more**

We offer fully equipped facilities for practice, including a workshop for practical training, a CAD room, and an automotive service center. Through practical education and research linked to real-world applications, students will be able to gain applicable skills.

**Comprehensive instruction with small class sizes, fostering curiosity and inquiring minds**

For exercises and experiments, we've implemented comprehensive small class size instruction. With our instructors' easy to understand lectures and teaching, we cultivate mechanical engineers with a strong will to create, abundant sensitivity, and originality.

**Training automobile development engineers to possess knowledge and skills**

The Automobile Technology Course enables students to learn more advanced expert knowledge of automobiles produced by gathering the best aspects of mechanical engineering.

## Department of Information and Electronic Engineering

With information science and electronics as a base, students will receive an overall education about systems that make people's lives better

**Cultivating information engineers and electronics technicians with practical knowledge**

Our curriculum allows students to learn wide-ranging fields, ranging from hardware to software, and through information systems exercises and human electronics experiments, they will acquire highly specialized, practical technical skills.

**A curriculum emphasizing exercises, experiments, and group work**

Students will think as they engage in hands-on exercises and experiments in order to heighten their creative power and imagination. In addition, through group work, students will enhance their cooperation, communication skills, and problem solving abilities.

**Obtaining qualification to take the national exam for clinical engineering**

By obtaining the required credits by the third year and the required advanced course credits at Teikyo University Junior College in the fourth year, one can obtain qualification to take the national exam for clinical engineering.

## Department of Information Science Correspondence Course

Using our flexible learning system, students can study at their own pace, going through the same process as on-campus students

## Department of Aerospace Engineering

Creating aerospace engineers who are ready to use all of the latest technologies

### Aerospace Engineering Course

**Core courses forming the foundation of science and engineering learning are taught thoroughly**

Mathematics, physics, chemistry, information base, language (English, expression in writing) and other basic subjects are thoroughly taught. There are also makeup courses for some of these subjects to enable students to progress in their studies without fail.

**Comprehensive exercises and research equipment allowing students to learn with the real thing**

Complete exercises and research programs are offered to promote applied learning. This curriculum also enables students to study cutting-edge aviation and space engineering through wide-ranging research and education using real machines such as high-grade supersonic training planes.

**Thorough career support from the whole university**

Personal instruction on what path to take and how to find a job, and detailed guidance on graduate study from your assigned instructor. Our entire university supports the realization of each student's career dreams.

### Helicopter Pilot Course

**Acquire the fundamental knowledge that pilots require**

In addition to the foundation subjects in the Aviation and Space Engineering Course, students can prepare for academic examinations for pilot license acquisition by learning fundamental knowledge from the first year, covering the mental preparation of pilots, weather, laws and regulations, and so on.

**From the latter semester of the first year, aspiring professional pilots will be able to engage in piloting exercises**

Flight practice is held twice a week from the second half of the first year. Integrated practice periods are also established during some of the spring and summer vacations, a comprehensive curriculum is in place to support qualification as both a private pilot and a commercial pilot.

**Career support for people aiming to become professional pilots**

In counseling for careers in government-run offices such as the Japan Coast Guard and police, as well as private companies that operate helicopters, careful guidance is given to suit the aptitude and wishes of each individual.

## Department of Biosciences

Studying bioscience from the fundamentals to enhance one's ability to meet the needs of society

**An unified curriculum linking together basic and specialized subjects**

Our efficiently-designed curriculum allows students to learn the basics necessary to understand bioscience (biology, chemistry, and English) along with related specialized subjects, all in a linked manner.

**Solidifying students' knowledge with lectures connected with experimentation and research**  
We emphasize our comprehensive bioscience-related experiments and educational research on the latest technology so that students can apply the knowledge they gained during lectures. Students will use practical learning to obtain a high level of specialization.

**Variety of advanced research tools**

Advanced research tools are installed, including DNA sequencers, real-time PCR, HPLC, mass spectrometers, NMR, etc.

## School of Medicine

Humanity is the foundation of medicine.

Creating excellent doctors possessing the latest medical knowledge and techniques, as well as the humanity expected of a medical professional.

## Faculty of Pharma-Science

We provide a cutting edge learning environment where you will master the secret of healthcare with pharmaceuticals.

Cultivating high-quality pharmacists possessing both humanity and strong scientific ability.

## Faculty of Medical Technology

Developing the medical science technicians needed in the present day.

### Department of Orthoptics

In an excellent learning environment, creating orthoptists who can help people maintain their eye health

### Department of Nursing

Creating nurses full of humanity who can respond to people's diversifying health and lifestyle needs

### Department of Radiological Technology

Creating radiology specialists who can operate in advanced clinical environments

### Department of Clinical Laboratory Science

Creating medical laboratory scientists who possess specialized knowledge and techniques, humanity, and internationality

### Department of Sport and Medical Science

Gain the diverse knowledge and skills necessary to be a sports and medical specialist.

### Department of Judo Therapy

Creating judo therapists with advanced medical techniques and knowledge who can support patients' health

## Faculty of Fukuoka Medical Technology

Nurturing leaders in advanced medical technology.

### Department of Physical Therapy

Creating rehabilitation specialists with reliable knowledge, skills, and the ability to cooperate

### Department of Occupational Therapy

Creating skilled and humane occupational therapists who support patients' return to society both physically and mentally

### Department of Nursing

Department of Nursing cultivates highly-skilled nurses that are able to take the lead in health care, medical and welfare services in the local community while brushing up their nursing skills and humanity.

### Department of Radiological Technology

Department of Radiological Technology teaches students skills, high ethical standards, and rich humanity in order to foster radiological therapists that can return technological progress to the society.

### Department of Medical Technology

This department has two courses, the Emergency Medical Technician Course and the Medical Engineering Course. Each course equips students with high-level expertise and skills while providing them with ethics and cooperativeness with the aim to foster medical engineers that can make contributions to team medical care and community medicine.

## Teikyo University Junior College

In 2 years, students acquire the education and practical skills that are helpful in the real world. Students also have the option of transferring to Teikyo University.

We offer a special entrance exam for international students

### Student's Message

Department of Contemporary Business  
Jennifer Lee

With the view of transfer to another university, I am absorbing highly concentrated knowledge.

I selected what I really wanted to study the most from a broad range of curriculums. Microeconomics seemed to be difficult to study at first, but I found it easy to understand and enjoyable once I started studying this field. I would like to get into a business to make and offer tourism plans for Malaysia, so that I can convey the attractions of Japan including big cities, Kamakura, and the majestic winter sceneries of Hokkaido.

### Department of Human Cultures

The education, knowledge, and skills gained through our seven-component axis of learning will serve well in transferring to another school or getting a job

#### Seven subjects that will open more paths for students

Through our curriculum, based around an axis of seven subjects (communication, understanding other cultures, calligraphy, art, fashion, psychology, and sports), we make it easier for students to transfer to another school or find a job.

#### Small class sizes let each person be themselves

With our comprehensively-implemented small class sizes, our instruction can be carefully calibrated to each person's unique traits and goals. We support proactive learning on the part of students in order for them to achieve their goals.

#### Teaching the basic skills required to become a businessperson ready to work

Through English and information processing techniques, students learn effective communication and mutual understanding, which are skills crucial to becoming a professional who is active on the international stage.

### Department of Contemporary Business

Cultivating professionals who have the knowledge and skills required in today's complicated and ever-diversifying business world

#### A curriculum allowing students to acquire the practical knowledge and skills used in the business world

In order to cultivate professionals suited to today's business world, we put three areas (modern business, practical business, economics and management) at the core of our curriculum focused on real-world applications.

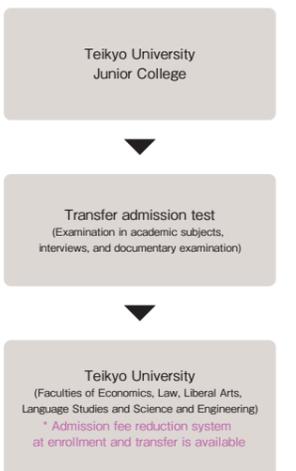

#### Subjects from other faculties can be studied, and the door to transferring schools is open

Students can take subjects in the Faculty of Economics, Law, Liberal Arts, Language Studies, Education, and more. After graduation, they can start working or also transfer to any of the faculties of Teikyo university (excluding the medical-related faculties).

#### Building professionals with small class sizes and a focus on the ability to utilize information

Our small classes focus on written expression, presentations, communication, and business English. With our careful instruction, students will be able to work to improve their ability to utilize information.

### Teikyo University Group Transfer admission system

※Please refer to our website for details:  
<http://www.teikyo-u.ac.jp/>

The special transfer arrangement is also available for those with great academic performance during the first semester which exempts them from taking the subject exam.

# Educational goals

## Faculty of Economics

In the School of Economics, our philosophy of education is rooted in Teikyo's founding principles - contribute in an imaginative way to the economy that our society has created through cultivating practical knowledge and logical thinking skills. Graduates will be able to work in both Japanese companies as well as international companies, dealing with both the Japanese economy and those of countries around the world.

## Faculty of Law

At the Faculty of Law, we aspire to create graduates according to our school's founding principles who, through the core educational goal of practical learning, gain critical knowledge of the law as well as the ability to make balanced judgments and think logically.

## Faculty of Liberal Arts

At the Faculty of Education, in accordance with our school's founding principles, we seek to explore the roots of academia while at the same time fostering methods of knowledge which can be applied to a wide range of jobs. We seek to create professionals who possess specialized knowledge and a wide-ranging education through the core educational goals of internationalization and openness.

## Faculty of Language Studies

At the Faculty of Language Studies, in accordance with our school's founding principles, we set the goal of learning a language besides one's native language. In addition, our final objective is to cultivate a global citizen who can contribute to world society, who knows the proper way to interact with other cultures, and who has learned about the history and culture of the countries and regions that speak the language that person has learned.

## Faculty of Education

At the Faculty of Education, in accordance with our school's founding principles, students study the knowledge and skills for education, preschool education, and lifelong learning taught in schools and preschools, as well as basic principles of the various sciences related to education and society. These will be studied with an eye for historical background, practicality, and conducted from multiple perspectives in order to deepen students' knowledge and understanding of many aspects of education. In addition, we will build good character, and cultivate professionals who can understand with certainty the trends of the age and contribute to the development of society.

## Teikyo University Junior College

### Department of Human Cultures

At the Department of Human Cultures, in accordance with our school's founding principles, we aspire to create members of society who hold a global perspective and acquire the knowledge and skills needed to understand other cultures. In addition, they will deepen their understanding of their own country's culture and pass along those traditions. Lastly, they will aspire to create rich relationships with others, to establish their identity, and be able to contribute widely to society.

### Department of Contemporary Business

At the Department of Contemporary Business, in accordance with our school's founding principles, we aspire to create members of society who can contribute to the business world, who cultivate logical and practical knowledge and skills needed by the business world, and who also possess an overall understanding of that world.

## Faculty of Science and Engineering

At the Faculty of Science and Engineering, in accordance with our school's founding principles, students will gain a wide variety of knowledge concerning core sciences, engineering, and bioscience, and become able to make judgments based on an international perspective on how all of mankind can enjoy evenly the abundant resources and culture of the world. Through a program that includes experiments, exercises, logical calculations and the human factor, we aim to create members of society who have a high degree of specialization and who can support an imaginative and humane society of man.

## School of Medicine

The goal of the School of Medicine is to cultivate proficient doctors that can adapt to the progress in medical and other related sciences and changes in social situations based on the school philosophy. To do so, this school equips students with expertise and skills that are common in a wide variety of future medical fields, along with taking on comprehensive perspectives, an adequate capacity for judgment, and human qualities.

## Faculty of Pharma-Science

The Faculty of Pharma-Science aims to foster pharmaceutical technicians, trusted in medical teams or local communities, which can make broad social contributions having zeal in their studies, capacities of discovering/solving problems, and self-development, in addition to practical skills based on advanced-level knowledge and skills along with rich human qualities.

## Faculty of Medical Technology

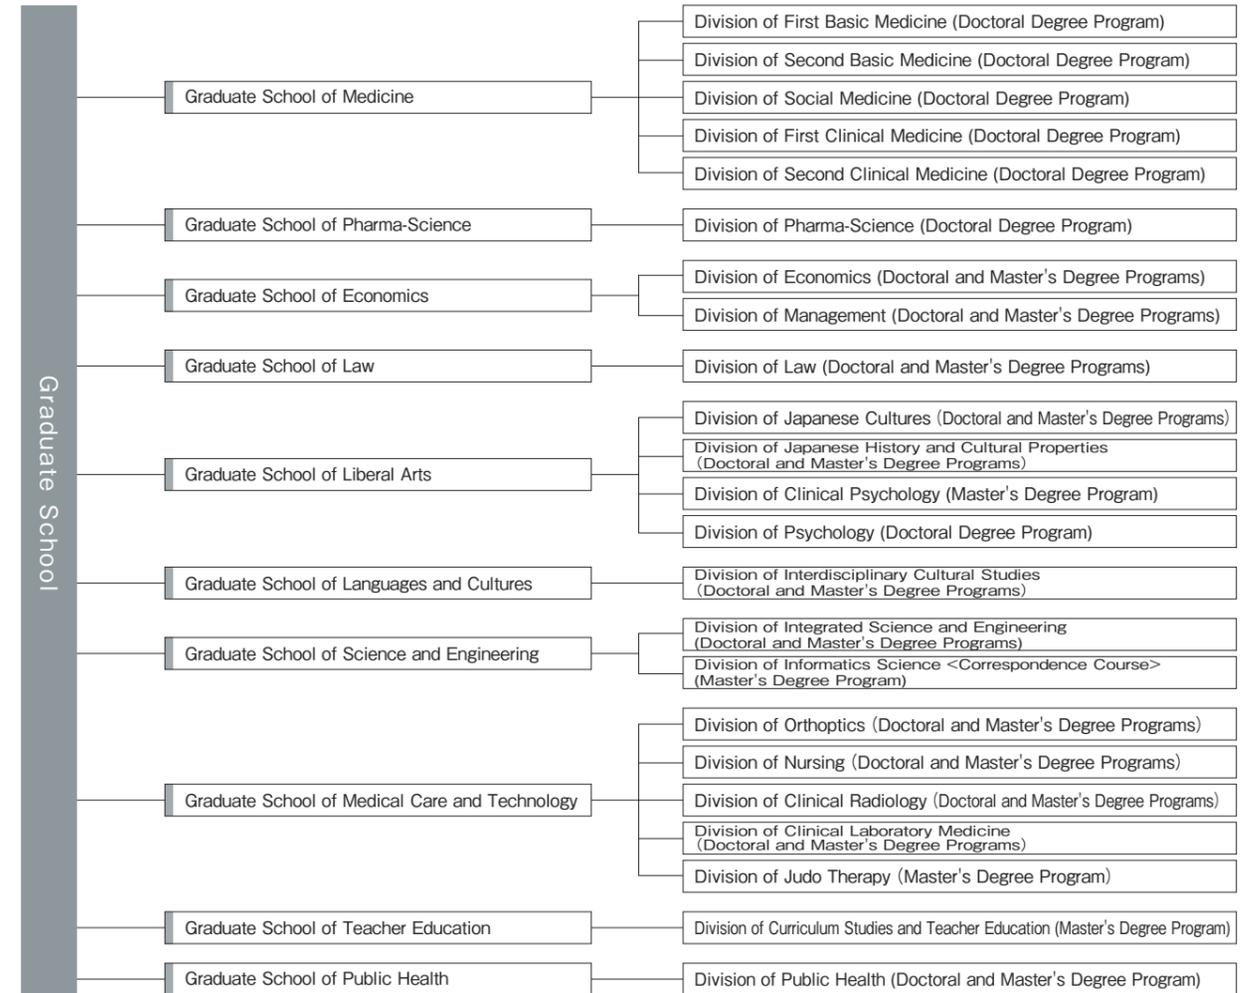

With the school philosophy, the goal of the Faculty of Medical Technology is to foster great individuals who can make social contributions while acquiring expertise, knowledge, skills, culture, and ethics necessary to take charge of modern medicine.

## Faculty of Fukuoka Medical Technology

In accordance with the school philosophy, the Faculty of Fukuoka Medical Technology aims to foster medical engineers, equipped with rich humanity and creativity, which can make contributions to community healthcare and medicine, while acquiring expertise, skills, culture, and ethic as a member in charge of high-level medical services.

# Graduate School (Teikyo University)

One can become a high level professional by going to graduate school.

## Pursuing all areas of study in even greater depth and with even greater focus on specialization.

In recent years, graduate schools have come to play an important role that not only nurtures researchers and college instructors, but also provides society with professionals who have a greater degree of expertise. To address this need, Teikyo University has established graduate programs that include 10 graduate schools and 21 majors. We have opened the doors to motivated students who aspire to master their respective areas of discipline. Studying at a graduate school will pave the way toward becoming a high-caliber professional.

### Student's Message

Graduate School of Liberal Arts (Doctoral and Master's Degree Programs)  
Yang Qing

You will certainly be able to convey your thoughts even with limited Japanese proficiency.

My current study theme is Gagaku of Japan (ancient Japanese court dance and music). Although the study field of my teacher is Japanese joruri puppet theater, which is different from mine, he has introduced a lot of reference materials. I have some opportunities to make presentations in class, which makes me feel nervous. But my companions cheer me up in such a situation. I really love this university's atmosphere that is very friendly to international students like me.

# International Student Support (Hachioji Campus)

We are always available to offer support for you to obtain a student visa along with admission assistance.

## Center for Global Education

This is the Teikyo University Group Network's contact point open to the world for international exchange.

Center for Global Education was established to meet various challenges created by the mounting tide of globalization and the promotion of internationalism within the Japanese educational circles. The Center offers preparatory courses for Japanese as a foreign language, Counseling Department and Purser Department, with its functions including the conclusion of agreements with foreign universities, with respect to accepting international students and sending Japanese students abroad to study. At present, approximately 400 international students study at Teikyo University and Teikyo Junior College combined whereby one will have opportunities to be exposed to various foreign languages and cultures by simply being on a Teikyo campus.

\* Teikyo Study Abroad Center (T-SAC) will be renamed into the Center for Global Education in September of 2015.

### Not comfortable with Japanese?

Center for Global Education staffs are fluent in foreign languages with Chinese, Korean and English. Don't worry if you are not comfortable with Japanese, our staff can help you.

## Career Support Center (CSC)

We offer the top level support systems of career development and employment.

1) The staff at our career support center (Hachioji Campus) are happy to give advice. Shinjuku Satellite Office 2) 3) Just like the career support center, one can receive detailed advice on finding a job. (appointment required) Since it's located in convenient Shinjuku, one can visit during free time in the middle of job searching and work on his/her resume and use the computer.

### We have a pre-admission support service for you.

- Assistance for obtaining the Certificate of Eligibility for Residence Status (VISA)**  
With respect to international students living abroad who have completed the admission procedure, we offer instructions to prepare the required documentations to apply for VISA. Additionally, after all the documentations have been received from students, T-SAC will submit their applications on your behalf.
- Housing Placement Service**  
Students who have obtained the Certificate of Eligibility for Residence Status (VISA) need to secure a place to live after being admitted to the school prior to coming to Japan. When renting an apartment in Japan, a guarantor is required to co-sign the lease but we have special arrangements with some major housing rental agencies whereby we will assume the role of guarantor for certain properties specified by us to facilitate the lease agreement process for our students.

### Post-Admission Student Support Services:

- Guidance for International Students**  
Guidance Counseling is available to international students to teach the school regulations and to offer guidance in relation to studying and living in Japan. If you have any concerns or problems with study, college life and other related issues, come in and talk to us anytime at the reception at T-SAC. We are here to help you.
- Special Classes for International Students**  
After being admitted to the faculty, if you are not comfortable with Japanese or if you have concerns about your life on campus, we offer a full support structure. With respect to the subjects such as English, Modern English and Practical English, these courses are offered with contents gearing towards international students and, as alternate subjects, Japanese I through IV are offered with several classes being available for each level. Both Life Design Exercise (prerequisite) and Japanese Expressions (prerequisite elective) gearing toward international students are also offered in several classes.
- Issuance of commuter ID and other identification**  
Necessary identification documents will be issued when purchasing a student commuter pass.
- Assistance with renewing/changing residence status**  
The student visa must be renewed for each period of stay. We will help draw up and prepare the necessary documents, which may differ depending on an individual's circumstances. Please consult with T-SAC if you have any questions.

### Message

We give you our full support to help you with Japanese or unfamiliar aspects of living in a foreign country!

Everyone on the Center for Global Education staff has studied and lived abroad, so we have all experienced the uncertainties, anxieties, language barriers, and differences in customs and communication that exchange students are facing. Therefore, our greatest asset is the fact that we can sympathize with you and help you solve your problems. We provide assistance not only for campus life, but also for all aspects of living in Japan, including alien registration, visa applications, opening a bank account, and finding an apartment. If you have any concerns or worries, stop by! We'll do our best to help you.

Center for Global Education  
Nao Inoue

### Features

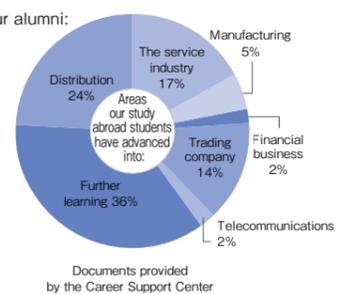

- Point 1: Increasing employability**  
Since we make defining goals and employability a priority early on, we give guidance to all new students with personalized career design maps designed for new students. We allow students the opportunity to think about the person they want to become with our mandatory "Designing Life Practice I/II" course, and improve employability with our comprehensive personal development support (career education).
- Point 2: Lifetime support (Shinjuku Satellite Office)**  
We've linked up with Tokio Marine and Nichido Career Service and created a career support center satellite office in Shinjuku. To support students' and alumni's job searches and career changes, we are strengthening our lifetime career creation support, including offering individual consultations with advisors (appointment required).
- Point 3: Internship I/II 2: Advanced Internship I/II**  
We've put internships at the core of our self-development support (career education), and students can experience work life from their first year. We work to improve students' perspective on work from early on, deepening learning on specialized areas and teaching related disciplines. Our programs have earned high praise from the companies and organizations who've accepted our students.

### Paths for study abroad students

Many of our study abroad students go on to further studies or Japanese companies after graduation.

Companies that have hired our alumni:

- ANA AIRPORT SERVICES CO., LTD.
- Kyosan Electric Manufacturing Co., Ltd.
- Cocokara line Healthcare Inc.
- SHOWA PRECISION TOOLS Co., Ltd.
- Seven-Eleven Japan Co., Ltd.
- NITORI
- FAST RETAILING CO., LTD.
- Hoshino Resort Co., Ltd.
- Yodobashi Camera Co., Ltd.
- WORLD CO., Ltd.
- Other

### Student Message (Prospective employee)

Now working at:  
NISHIO RENT ALL Co., Ltd.  
Faculty of Economics,  
Department of Business Administration, Management Course  
Thong Kok Chong

Interacting with the region around the university broadens my perspective.

Since my second year, I've been attending international exchange events in Hachioji twice a month. Thanks to the influence of the people I met there, I got interested in Japanese culture and lifestyle. If you come to Japan, make sure you create opportunities to interact with local people, and try actively participating in things such as volunteer work and international exchange events. You'll be able to make more out of your university studies, and your vision will broaden as well.

### Student Message (pursuing further education)

Now studying at:  
Tokyo University Graduate School  
Faculty of Economics,  
Department of Economics  
Zhao Zihan

I learned from the depth of the lectures and from the passion of the teachers

I chose Teikyo University because it's sister schools with Beijing Language and Culture University, and because many of my seniors were graduates from there. One of the biggest things I remember from when I was a student there was that when students became unsure with the content of the lectures, the teacher would work with that student until they were satisfied and had developed an understanding. I also received advice before the graduate school entrance exams, and help on what books to study. I hope to become the kind of person who can contribute to society with the same feeling of responsibility which my teachers had.

International Student Support ( Hachioji campus )

Tutors for International Students

Tutors for international students are undergraduate students who take a main role of supporting international students voluntarily.

Tutors for international students are volunteers from the Hachioji Campus and support students from other countries. They support international students with their studies and daily life. Any student on the Hachioji Campus, regardless of their nationality, can apply to work as a tutor for international students.

[Activities]

- Helping international students with guidance
- Interacting with international students at social gatherings etc.
- Help with registering for classes and with daily life

Student's Message

There are many enjoyable and fun events. You won't feel lonely.

We provide assistance support for you at any cost in order to eliminate anxieties you might feel about life in Japan. In order for you to start your life in Japan as smooth as possible, ask us anything, for example, about procedures, courses' registrations and questions you had during the class. Our events include a cooking contest between nations, a futsal tournament, Christmas party, and more. Your smiles give us power and motivations. Let's take part in our activities!!

Department of Economics  
Department of Tourism Management

Shuhei Tokugawa

# International Student Support (Utsunomiya Campus)

We are always available to offer support for you to obtain a student visa along with admission assistance.

## International Student Support

Student Support Group

Student Support Group  
Student Support Team  
Nobuyuki Takahashi

**While supporting international students, we promote their interactions with local communities and Japanese people.**

The Student Support Team of Student Support Group establishes support systems for learning, career formation, and living of international students, such as scholarships, acquisition of qualifications, job-search activities, academic advancement, and housing, in order to provide them with proper assistance. In addition, Utsunomiya Campus has students dormitories within the campus premise, so that international students can lead a comfortable campus life.

## Career Support Center (CSC)

The university-wide employment support system is the most outstanding feature of the career creation support provided at the Utsunomiya Campus. The employment committee composed of the teaching staff of each department and the staff members of the career support center takes the lead in providing employment support based on coordination of teaching and office staff members.

### Three Features of Career Support

Point 1

**Employment Support System under the Cooperation of Instructors and Staff Members**

The employment committee that is composed horizontally of the teaching staff of each department and the staff members of the career support center takes the initiative in providing employment support for students.

Point 2

**Detailed employment guidance**

The employment course, conducted as several lectures from October of the third year in school, teaches students about how to fill in employment entry sheets and how to study the targeted industry, and also how to prepare for interviews and written examination, and even how to coordinate their dress. The subject "Career Design I" conducted during the first year in school gives students an opportunity to consider their future. Based on these efforts, fulfilled self-development support is offered.

Point 3

**Coordination with the Hachioji Campus**

We strengthened our coordination between both campuses by exchanging information acquired from companies regarding their desired human resource needs.

## International exchange

There is an international exchange room established in Utsunomiya Campus as an interaction hub for international students. This room is used by international students that enrolled in Teikyo University in order to be friends together beyond national borders and lead enjoyable campus life. Currently, one tutor is assigned to each freshman international student for support, while offering a wide variety assistance for their campus life.

Student's Message

Enjoy your student life at a campus with active international exchange interactions.

Utsunomiya Campus of Teikyo University provides international students with necessary support so that they can get used to the Japanese environment and learn without any anxieties. The international exchange room for international students is always active and cheerful with multinational students and Japanese tutors. Broaden your perspective by coming into contact with many people from different nationalities during your student days. This will definitely serve as a staple for you to be active wherever you are in this world in the future.

Department of Human Information Systems  
(Renamed to Department of Information and Electronic Engineering in April of 2015)

Kiwamu Kobayashi

# University Life

Hachioji Campus version

## Introduction to university life and the story of a day in the life of a student

### A day in the life of a student

Tao Yibei, whose dream is to create a shop in China that propagates Japanese fashion. As she enjoys student life, she also works part time in a convenience store and as a language school teacher. She does her best to live on the cheap by shopping at the least expensive places she can find. We follow her and see what a day in her life is like.

START

8:30am **Leaving for school**  
She eats breakfast and heads to the university

8:45am **Walking to the university**  
She walks to Hachioji Campus. Nearby, the Tama Monorail runs, connecting the Keio Line and the Odakyu Line.

10:45am **The library**  
Because the library (MELIC) has an effective database, it's helpful for writing reports.

9:00am **Learning about risk management theory**  
1st period class. Today, it's risk management theory. She pays careful attention to the lesson.

11:45am **In front of the information board**  
It just so happened that today was the pass/fail announcement for Tutors for International Students. She passed!!

12:00pm **Lunchtime**  
Lunch is at the student cafeteria. Today she's having omelet with rice.

1:00pm **Part time job**  
Working at a convenience store. She has to handle the pressure and respond quickly to customers' requests.

12:30pm **To the part time job**  
Heading out

6:00pm **Shopping with a friend**  
Today she's window shopping and dining with her friend in Tachikawa. She's good at singing JUJU at karaoke.

9:00pm **Returning home**  
Once a day, she calls or e-mails home. Lately, she gets told "you've really grown up" a lot.

### Student life is easier than one might think. The kindness of others really helps support me.

I have no problems with listening to Japanese, but I've gotten help a number of times from teachers and friends with my speaking. Sometime we have opportunities in class to discuss in Japanese, and now I really expressing my opinion there. I've learned how to do things like change trains as well as clean and do the laundry in my first time living alone, and even meet people from other places at work. I've grown a lot this past year, and gotten much closer to being independent. The university staff has really helped me out a lot. Now that I've been selected as an international exchange assistant, I want to shift from being supported to giving support, and help out other study abroad students.

Faculty of Economics,  
Department of Business Administration  
Tao Yibei

### My room

Since my room's on the corner of the building, I've got two balconies, and I like how open the room feels. I like to keep the interior decoration simple.

#### Data

- Single room with a kitchen
- Rent: 60,000 yen
- Getting to school: 20 minute walk
- Part time jobs: convenience store attendant (1 day/week), Chinese teacher at a language school (1 day/week)
- Scholarships: none

#### On living alone

I chose here because it's close to the school and because it's safe. Living here, I feel great because there's a lot of nature here and the air is clean. During the summer, I can hear the cicadas, and during the night, I can see the stars.

Cooking in this earthenware pot makes food delicious

Tea, which I love

A charm that protects you if you put in the home

### Q & A about student life

We got Tao to answer some questions about student life at Teikyo University from her perspective.

**Q** Why did you choose Teikyo University?

**A** After graduating from high school in China, I went to a Japanese language school for a year and a half. While I was there, one of my seniors at my part time job was a graduate of Teikyo University. Hearing about the university, it sounded like I could do the things I want to do, and so I decided to enroll.

**Q** What are some of the points about Teikyo University that make it easy to learn here?

**A** It's really great how you can choose to take Foreign Language Classes in Japanese or English. I can speak a little English, so at the start I chose classes in English, but now I want to get better at Japanese, so I'm taking classes in Japanese.

**Q** What class do you like?

**A** I like Macro/Micro Economics, which teaches the basics of economics, the most. It's interesting hearing about why certain economic events occur in society.

**Q** Was there anything you were worried about after enrolling?

**A** Yes, but the university staff helped me out with a lot of things, so I felt reassured. One thing that really helped me out was the study abroad student guidance that I received right after entering. They told me how to do things like the paperwork for my residence and applications that needed to be done for the city office. And because there were social events for study abroad students and Japanese students, I was happy about being able to make friends easily.

**Q** What's your dream for the future?

**A** I'd like to run a select shop near Shanghai in China. Because I like fashion and items with a Japanese culture element to them, I want to introduce those sorts of goods according to my tastes.

# University Life

Utsunomiya Campus version

## Introduction to university life and the story of a day in the life of a student

### A day in the life of a student

Kuan loves Japanese animation movies, automobiles, and electrical products, so he wanted to learn the essence of manufacturing in Japan at a Japanese university or college. He covers his living expenses with a scholarship he received and the wages for his part-time work during his school life at Teikyo University. We followed him to see his typical day that was busy with studying and part-time work.

**START**

**10:30am Leaving for school**  
It takes 15 minutes to the campus from the apartment by bus.

**10:35am International Exchange Room**  
After arrival, he prepares for the next class at the International Exchange Room.

**11:00am Class of thermodynamics**  
He concentrates on the class seating in front, while trying hard to take notes.

**12:30pm Lunch break**  
He gets lunch at a convenience store in the university, "Yotteco!". It has a great variety of foods, so it is difficult to make decisions on what to buy.

**12:40pm Lunch**  
He takes lunch with his friends at the Center for Global Education.

**1:00pm Training Center**  
Various kinds of sports facilities are another attractiveness of Utsunomiya Campus. Students can be refreshed by exercise.

**1:40pm Class of mechanical drawing methodology**  
Students learn how to create drawings manually. The instructor carefully teaches them.

**4:40pm Class of chemistry II**  
He takes care not to miss what the teacher writes on the blackboard during the class.

**5:00pm After school**  
After school, he learns English conversation at an English conversation school within the premise. The instructor of this school always gives us interesting stories.

**7:00pm Part-time job**  
He works as a part-time stocker at a supermarket.

**10:00pm Coming home**  
He loves to watch pro wrestling videos on YouTube.

I spend days supported by teaching staff members and friends. I feel satisfied with my campus life in Japan.

Having a desire to learn concepts and technologies of the manufacturing of Japan underlying in Japanese animation movies, automobiles, electrical products, I had hoped to study in Japan. As I started to go to the Institute Bahasa Teikyo, I was able to receive a scholarship and successfully enrolled in Teikyo University. Courses and classes are quite high-level with advanced content, and I study while trying to understand Japanese. Thanks to my teacher who often gives easy-to-understand explanations, my love toward my favorite subjects, math and physics, becomes stronger and stronger. I really appreciate the university's teaching staff and tutors for international students who provide us with sincere support by showing us how to select the subjects and explaining common rules to be observed at a part-time workplace. Why don't you join us in Teikyo University with fulfilling facilities and a comfortable study environment?

Department of Mechanical and Precision System  
Kuan Keng See

### My room

I can feel nature when hearing the sound of the streams of a river nearby. I changed the wallpaper on the ceiling to the one with visible stars when the light is turned off. I can get relaxed because of that.

**Data**

- Home: 1K
- Rent: 40,000 yen
- Getting to school: 15 min. by bus
- Part-time jobs: A grocery attendant at a supermarket (4 days a week)
- Scholarships: Received

**On living alone**  
A teacher of the Japanese language school in Malaysia introduced this room to me, which is located just in the center between school and Utsunomiya station about 15 minutes by bus from both of them. The place of my part-time job is also quite near from my room.

I prefer potato chips and those dishes with chili sauce.

I thought it would be cool so I bought a skateboard recently.

### Student Dormitory Information

Utsunomiya Campus has a student dormitory within its premise (Monthly rent: 10,000 yen excluding heating and lighting expenses). This campus provides students with the best environment to study. Contact the student support group of Utsunomiya Campus for the details.

**Q & A about student life**

We heard from Mr. Kuan about his school life at Teikyo University on his own viewpoint.

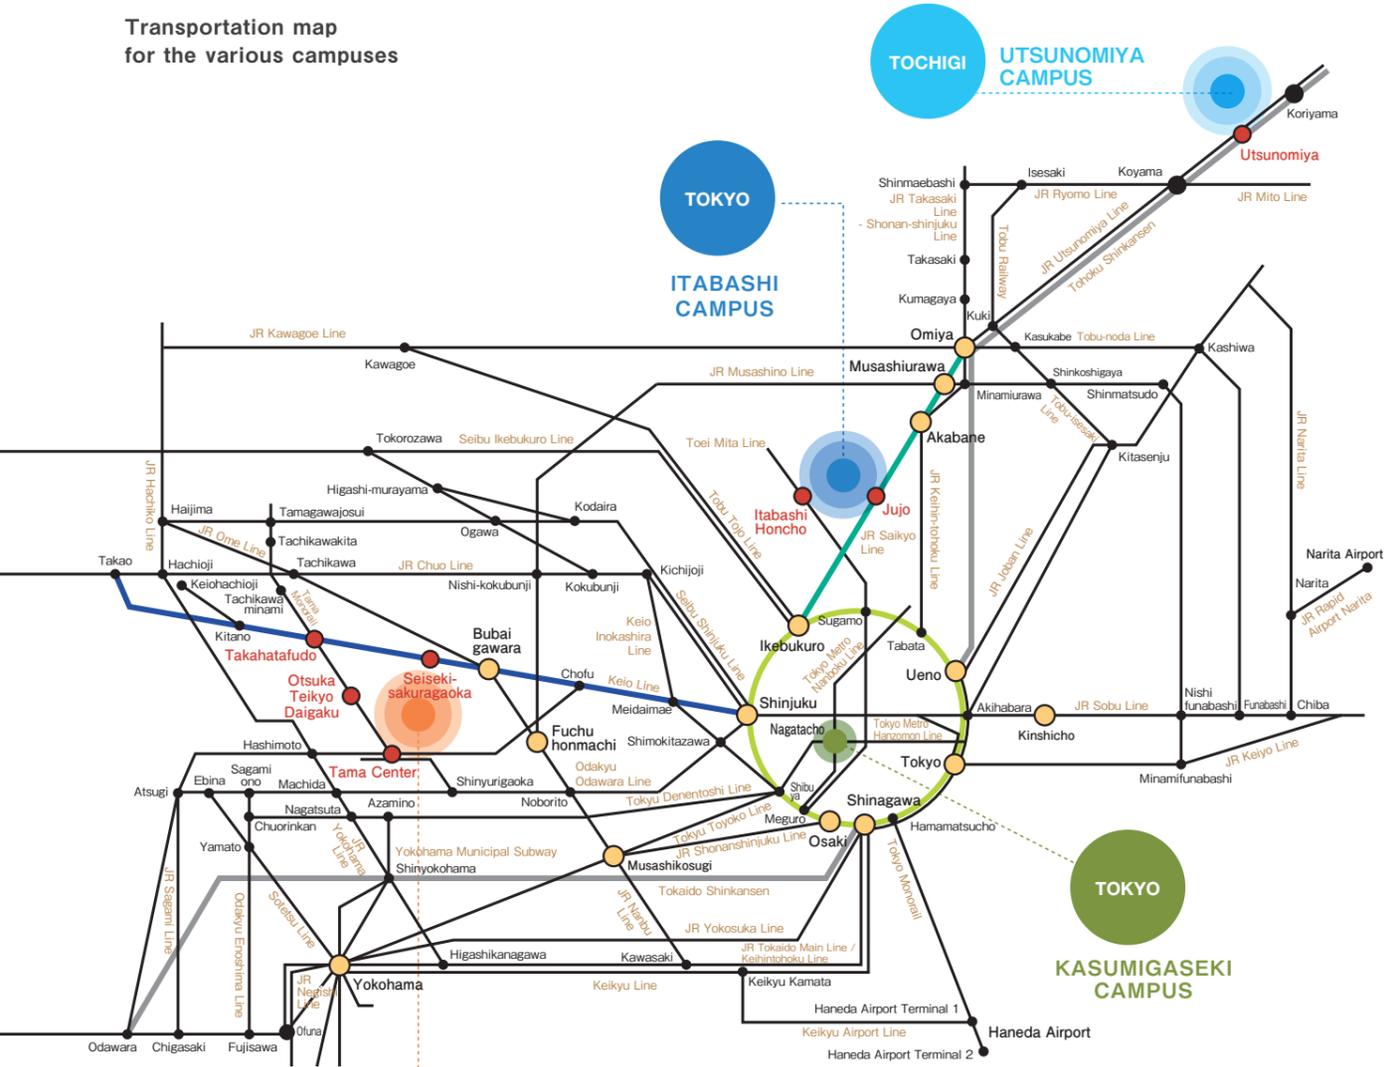

**Q** Did you have any anxieties after enrollment?  
**A** I got bothered by opening my bank account and subscribing for the mobile phone contract. But faculty staff and tutors kindly taught me how to handle these things, so I really appreciate them. You can meet international students from a wide variety of countries at the International Exchange Room, where we can support each other.

**Q** What is your favorite subject?  
**A** I love mathematics. The content of the class I take is quite advanced and not that easy to understand. But I've been good at math since I was a child, and there is no problem if you can understand Japanese. Teachers are also good at teaching in a very easy-to-understand way. This makes me more and more motivated to engage in higher learning.

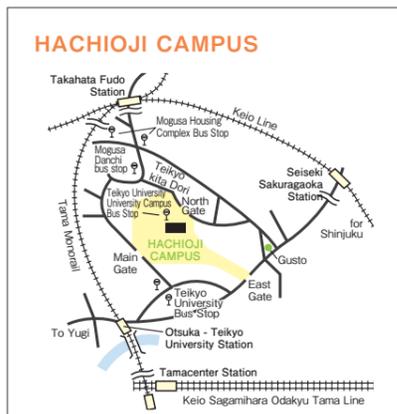

**Q** What is your future dream?  
**A** I want to develop inventions that serve for people in an industrial field. In order to achieve this, I'm now considering that I need to deepen my knowledge and skills by study at the graduate school in addition to four years of undergraduate study.
